

# Visual Planning in Q360

Turn complex project plans into a shared, real-time overview that's always synchronized with your Q360 data

Visual Planning in Q360 provides a **simple, visual way to plan and coordinate work across teams** using shared boards and timelines.

It is designed for **project managers, discipline leads, and operational teams** who need better alignment and control.

By making plans visual, collaborative, and **100% automatically synchronized with all relevant Q360 data**, it reduces manual updates, improves commitment, and significantly increases delivery reliability.

## Today's Planning Challenges

- Plans are often hidden in complex schedules (e.g., Gantt charts)
- Limited shared understanding across disciplines
- Weak ownership and commitment to tasks
- Difficult to identify bottlenecks early
- Communication happens in silos (email, meetings, side notes)

**Result:** Delays, rework, and reduced predictability

## The Solution

**Introduce Visual Planning within Q360 as a shared planning workspace.**

- Activities are visualized as cards on a timeline or board
- Teams collaboratively define:
  - Tasks, documents, decisions
  - Dependencies and responsibilities
- Plans are continuously updated in short planning cycles (e.g., weekly)

**Single source of truth:**

- Plans are automatically synchronized across all Q360 modules
- No duplication or manual updates

**Result:** a living, transparent plan that everyone understands and contributes to.

## Key Benefits

**Efficiency & Time Savings**

- Faster planning and re-planning
- Less coordination and fewer status meetings

**Quality & Control**

- Clear ownership and dependencies
- Early detection of risks and constraints

**Cost & Predictability**

- Reduced delays and rework
- More reliable progress and forecasting

**Collaboration & Alignment**

- Shared understanding across teams
- Stronger commitment and communication

**Automation & Data Integrity**

- No manual synchronization
- Always up-to-date, consistency data
